           AAT03164-T031366 are primers used for the amplification of the hum Mc1-1 gene. The Mc1-1 protein is a Bc1-2 related protein, the Mc1-protein was expressed and used to investigate the interactions of Mc1-1 with other proteins known to be involved in apoptosis (excluding the Bax protein). Proteins detected using this method (excluding the Bax protein).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to Mc1-1 gene regulatory elements and the variant Mc1-1s/deltaTM. The anti-apoptotic Mc1-1 protein is encoded by exons 1, 2 and 3. The pro-apoptotic Mc1-1s/DeltaTM variant encoded by exons 1 and 3 is obtained due to alternative mRNA splicing. The Mc1-1 gene regulatory element is useful for modulating the Mc1-1 gene expression in a cell e.g., neuronal cell or tumour cell, such that apoptosis of the cell is induced or cell viability is increased. The Mc1-1 and its regulatory elements are used for treating pathological conditions which include cancer, diabetic retinopathy, corneal graft conditions which include cancer, diabetic retinopathy, corneal graft neovascularisation and neovascular glaucoma, epithelial conditions such as psoriasis, autoimmune diseases like rheumatoid arthritis, systemic lupus erythematosus, and neurodegenerative diseases. The present sequence is a PCR primer #105c, used for the extension reaction of the human
                                                                                                       Example 1; Page 22; 62pp; English.
                                                                                                                                    Detection of novel proteins involved in apoptosis - with proteins involved in apoptosis
                                                                                                                                                                                  WPI; 1995-373811/48

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                              specification describes methods for DNA amplification, wherein a template DNA containing nucleotide analogues is amplified in the presence of nucleotide analogues and a substance which lowers the Tm value of double-stranded nucleic acids. Suitable nucleotide analogues are 7-deaza-dGTP, 7-deaza-dATP, dITP and hydroxymethyl-dGTP. Suitable Tm value-lowering substances are formamide, dimethyl sulphoxide and trimethylgiycine. The methods improve the amplification of DNA. Also, DNA fragments which originated as RNA can be amplified without particular the particular of the property of the substance of the careful of the control of the control of the careful of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Simple and accurate method for DNA amplification – uses amplification in the presence of nucleotide analogues together with a compound which lowers the Tm of double-stranded nucleic acids {\tt acc}
                                                                                                                                                                                                                                                                                                Sequence 21 BP; 4 A; 5 C; 7 G; 5 T; 0 other;

If the protein Bcl-2 related protein apoptosis levels are decreased due to protein binding to and inactivating Bax.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 6; Page 31; 36pp; Japanese.

                                                                                                                                                                                                                                                                                   specification describes methods for DNA amplification, wherein a template DNA containing nucleotide analogues is amplified in the presence of nucleotide analogues and a substance which lowers the Tm value of double-stranded nucleic acids. Suitable nucleotide analogues are 7-deaza-dGTP, 7-deaza-dATP, dTTP and hydroxymethyl-dUTP. Suitable Tm value-lowering substances are formamide, dimethyl sulphoxide and trimethylgycine. The methods improve the amplification of DNA. Also, DNA fragments which originated as RNA can be amplified without more than the DNA.

The present invention relates to Mcl-1 gene regulatory elements and the variant Mcl-1s/deltaTM. The anti-apoptotic Mcl-1 protein is encoded by exons 1, 2 and 3 The pro-apoptotic Mcl-1s/DeltaTM variant encoded by exons 1 and 3 is obtained due to alternative mRNA splicing. The Mcl-1 gene expression in a cell e.g., neuronal cell or tumour cell, such that apoptosis of the cell is induced or cell vlability is increased. The Mcl-1 and its regulatory elements are used for treating pathological conditions which include cancer, diabetic retinopathy, corneal graft neovascularisation and neovascular glaucoma, epithelial conditions such as psoriasis, autoimmune diseases like Theumatoid arthritis, systemic lugus erythematosus, and neurodegenerative diseases. The present sequence is a RT-PCR primer Mcl-1-F5, used for the amplification of the human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to Mc1-1 gene regulatory elements and the variant Mc1-1s/deltaTM. The anti-apoptotic Mc1-1 protein is encoded by exons 1, 2 and 3. The pro-apoptotic Mc1-1s/DeltaTM variant encoded by exons 1 and 3 is obtained due to alternative mRNA splicing. The Mc1-1 gene regulatory element is useful for modulating the Mc1-1 gene expression in a cell e.g., neuronal cell or tumour cell, such that apoptosis of the cell is induced or cell viability is increased. The Mc1-1 and its regulatory elements are used for treating pathological conditions which include cancer, diabetic retinopathy, corneal graft neovascularisation and neovascular glacucoma, epithelial conditions such as psoriasis, autoimmune diseases like rheumatoid arthritis, systemic lupus crythematogus, and neurodegenerative diseases. The present sequence is a pre-proporative Mc1-1 are the treating faths to the present sequence.

                                                                                  The present invention describes antisense oligonucleotides which modulate the expression of novel anti-apoptotic bol-2-related proteins. The antisense oligonucleotides can be used as therapeutic agents to prevent or delay inflammation or tumour formation by promoting apoptosis in human cells or tissues. They can also be used as research agents to establish the function of particular genes and as diagnostic agents in sandwich assays for detecting the level of novel anti-apoptotic bol-2-related proteins in a sample. The antisense oligonucleotides given in the present invention were designed to target human Al and mol-1 anti-apoptotic bol-2-related protein nucleotide sequences. The present sequence represents an antisense oligonucleotide for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAT03164-T031366 are primers used for the amplification of the human Mcl-1 gene. The Mcl-1 protein is a Bcl-2 related protein, the Mcl-1 protein was expressed and used to investigate the interactions of Mcl-1 with other proteins known to be involved in apoptosis (excluding the Bax protein). Proteins detected using this method can act as upstream activators or downstream effectors of a cellular protein such as Bax which induces apoptosis. If the protein is a Bcl-2 related protein apoptosis levels are decreased due to the protein binding to and inactivating Bax.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1182 GGACTCCAAGCTGTAACTTC 1201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antisense oligonucleotides which modulate the expression of novel anti-apoptotic bcl-2-related proteins are useful for inducing apo and treating associated diseases e.g. cancer - \frac{1}{2}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; Al; anti-apoptotic; bcl-2-related protein; antisense int

                                                                                                                                                                                                                                                                                     The present invention describes antisense oligonucleotides which modulate the expression of novel anti-apoptotic bcl-2-related proteins. The antisense oligonucleotides can be used as therapeutic agents to prevent or delay inflammation or tumour formation by promoting apoptosis in human cells or tissues. They can also be used as research agents to establish the function of particular genes and as diagnostic agents in sandwich assays for detecting the level of novel anti-apoptotic bcl-2-related proteins in a sample. The antisense oligonucleotides given in the present invention were designed to target human Al and present sequence represents an antisense oligonucleotide sequence. The human mcl-1 nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antisense oligonucleotides which modulate the expression of novel anti-apoptotic bcl-2-related proteins are useful for inducing apoptosis and treating associated diseases e.g. cancer -

The antisense oligonucleotides can be used as therappeutic agents to prevent or delay inflammation or tumour formation by promoting apoptosis in human cells or tissues. They can also be used as research agents to establish the function of particular genes and as diagnostic agents in sandwich assays for detecting the level of novel anti-apoptotic bcl-2-related proteins in a sample. The antisense oligonucleotides given in the present invention were designed to target human Al and mcl-1 anti-apoptotic bcl-2-related proteins in a sample. The antisense oligonucleotide sequence represents an antisense oligonucleotide for the human mcl-1 nucleotide sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes antisense oligonucleotides which modulate the expression of novel anti-apoptotic bol-2-related proteins. The antisense oligonucleotides can be used as therapeutic agents to prevent or delay inflammation or tumour formation by promoting apoptosis in human cells or tissues. They can also be used as research agents to establish the function of particular genes and as diagnostic agents in sandwich assays for detecting the level of novel anti-apoptotic bol-2-related proteins in a sample. The antisense oligonucleotides given in the present invention were designed to target human Al and mcl-1 anti-apoptotic bcl-2-related protein nucleotide sequences. The present sequence represents an antisense oligonucleotide for the human mcl-1 nucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antisense oligonucleotides which modulate the expression of novel anti-apoptotic bcl-2-related proteins are useful for inducing apoptosis and treating associated diseases e.g. cancer - \frac{1}{2}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2000-061908/05
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ackermann

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antisense oligonucleotides can be used as therapeutic agents to prevent or delay inflammation or tumour formation by promoting apoptosis in human cells or tissues. They can also be used as research agents to establish the function of particular genes and as diagnostic agents in sandwich assays for detecting the level of novel anti-apoptotic bcl-2-related proteins in a sample. The antisense oligonucleotides given in the present invention were designed to target human Al and mcl-1 anti-apoptotic bcl-2-related protein uncertained protein mcl-1 anti-apoptotic bcl-2-related protein nucleotide sequences. The human mcl-1 nucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 31; Column 33;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antisense oligonucleotides which modulate the expression of novel anti-apoptotic bcl-2-related proteins are useful for inducing apoptosis and treating associated diseases e.g. cancer - \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes antisense oligonucleotides which modulate the expression of novel anti-apoptotic bcl-2-related proteins.              The present invention describes antisense oligonucleotides which modulate the expression of novel anti-apoptotic bol-2-related proteins. The antisense oligonucleotides can be used as therapeutic agents to prevent or delay inflammation or tumour formation by promoting apoptosis in human cells or tissues. They can also be used as research agents to establish the function of particular genes and as diagnostic agents in sandwich assays for detecting the level of novel anti-apoptotic bol-2-related proteins in a sample. The antisense oligonucleotides given in the present invention were designed to target human Al and mcl-1 anti-apoptotic bcl-2-related protein nucleotide sequences. The present sequence represents an antisense oligonucleotide for the
                                                                                                                                                                                                                                                                                                                                              Antisense oligonucleotides which modulate the expression of novel anti-apoptotic bol-2-related proteins are useful for inducing apopund treating associated diseases e.g. cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       human cells or tissues. They can also be used as research agents to establish the function of particular genes and as diagnostic agents in sandwich assays for detecting the level of novel anti-apoptotic bcl-2-related proteins in a sample. The antisense oligonucleotides given in the present invention were designed to target human Al and mcl-1 anti-apoptotic bcl-2-related protein nucleotide sequences. The present sequence represents an antisense oligonucleotide for the
                                                                                                                                                                                                                                                                                                            Example 12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (ISIS-) ISIS

                                                                                                                                                                                                                                                                              The present invention describes antisense oligonucleotides which modulate the expression of novel anti-apoptotic bcl-2-related proteins. The antisense oligonucleotides can be used as therapeutic agents to prevent or delay inflammation or tumour formation by promoting apoptosis in human cells or tissues. They can also be used as research agents to establish the function of particular genes and as diagnostic agents in sandwich assays for detecting the level of novel anti-apoptotic bcl-2-related proteins in a sample. The antisense oligonucleotides given in the present invention were designed to target human Al and manual antisense of the present invention were designed to target human Al and manual antisense of the present invention were designed to target human Al and manual antisense of the present invention were designed to target human Al and manual antisense of the present invention were designed to target human Al and manual antisense of the present invention were designed to target human Al and manual and manual antisense of the present invention were designed to target human Al and manual antisense of the present inventory between the present inventory between the present inventory between the present inventory by the pre

/note="Organ: blood; Vector: l-gt-11; Site_1: Eco-RI;
Monocytes were prepared from blood by ficol1-hypaque,
percoll and T cell rosetting purification steps (purity:
96 %). mRNA was prepared from activated monocytes from a
patient with rheumatoid arthritis. mRNA was reverse
transcribed with MuLV. Using Eco-RI linkers CDNA was
cloned into l-gt-11 vector arms. The cDNA library was
screened by differential hybidization using radioactively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Conservative

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eukaryota; Metazoa;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              quality sequence stop: 26.
                                                                                                                                                                                                                                                     (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi14732114/gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for amplicillin resistance."

The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil47321141gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

                                                                                                                Zuechtungsforschung, Carl von Linne-Weg 10, Koeln, 50829, Germany This sequence is recovered from the left border of the T-DNA. It indicates an insertion within the locus defined by clone MPF21. The sequences are generated at the MPI for Plant Breeding Research in the context of the GABI-Kat project. GABI-Kat is part of the GERI-Kat project. GABI-Kat p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ROSSO,M., Strizhov,N., Li,Y., Reiss,B., Dekker,K. and Weisshaar,B. A new Arabidopsis thaliana T-DNA mutagenised population (GABI-Kat) for flanking sequence tag based reverse genetics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A pipeline for automated high-throughput generation of FSTs (flanking sequence tags) from Arabidopsis thaliana T-DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            and

Vector DNA was prepared from a derivative of pwD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid Rl. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note="Vector: PWD42nv; Purified genomic DNA from M. musculus C57BL/6J (male) was obtained from the Jackson

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil4732114 gblAF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for amplicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil4732114(gb)AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XLIO-Gold (Stratagene) cells and selected for ampiciliin resistance."

/clone="Ib="Narabidopsis thaliana T-DNA insertion lines"
/note="PCR was performed on DNA from Arabidopsis thaliana plants (T1) which were transformed with the T-DNA from vector pAC106. The lines contain one or more T-DNA insertions. The DNA fragment(s) resulting from the PCR were directly sequenced to determine the genomic sequence flanking the insertion. Sequences displaying significant smilarity to the A. thalaha nuclear genome sequence were processed for submission. T-DNA derived sequences were removed"

 $\sigma$ 

```
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            March 14, 2003, 04:33:38; Search time 95.137 Seconds (without alignments) 12681.353 Million cell updates/sec

Sequence 30, Application US/09226568
Patent No. 6001992
GENERAL INFORMATION:
APPLICANT: Ackermann, Elizabeth J.
APPLICANT: Ackermann, Elizabeth J.
APPLICANT: Bennett, C. Frank
APPLICANT: Hoan, Nicholas M.
APPLICANT: Marcusson, Eric G.
TITLE OF INVENTION: Antisense Modulation of No. 6001992el Anti-apoptotic
TITLE OF INVENTION: bcl-2-related Proteins
FILE REFERENCE: ISPH-0337
CURRENT EPILIAGTION NUMBER: US/09/226,568
CURRENT FILING DATE: 1999-01-07
NUMBER OF SEQ ID NOS: 39
SOFTWARE: PATENTIAN Ver. 2.0
IENGTH: 20
TYPE: DNA
ORGANISM: Artificial Sequence
FEATURE:
OTHER INFORMATION: Description of Artificial Sequence: antisense

APPLICANT: Bennett, C. Frank
APPLICANT: Dean, Nicholas M.
APPLICANT: Dean, Nicholas M.
APPLICANT: Marcusson, Eric G.
TITLE OF INVENTION: Antisense Modulation of No. 6001992el Anti-apoptotic
TITLE OF INVENTION: bcl-2-related Proteins
FILE REFERENCE: ISPH-0337
CURRENT APPLICATION NUMBER: US/09/226,568
CURRENT FILING DATE: 1999-01-07
NUMBER OF SEQ ID NOS: 39
SOPTWARE: Patentin Ver. 2.0
SEQ ID NO 29
LENGTH: 20
TYPE: DNA
ORGANISM: Artificial Sequence
PEATURE:
OTHER INFORMATION: Description of Artificial Sequence: antisense
OTHER INFORMATION: sequence
